# ENDER. HAMPTON MAN'S VIEW OF OYSTER TROUBLE

"Hampton, Va., Aug. 13. Daily Press

"That Press:

"The recent oyster fromble up the James between the tongers and so-called oyster planters, but in reality oyster ponchers, is likely to be fought with a determination on the part of the tonger to bring before the public for final settlement a long standing evil and air injustice to the poor class of tongers, who annually pay a license to work these rocks which the laws of Virginia have defined by the Bay

of Virginia have defined by the Baylor survey.

"It may be true, as 57t, Lawson lates, that these grounds, or the Frants for these grounds, lay outside of the Baylor lines, and are mostly soft mud and deep water, and are not worth 4 cents an acre for planting purposes, as the oysters smother in the mud as it is so soft.

"The ground occupied by Capt. Mills is a piece of bottom lying below Point of Shoals light." "Mr.—

(name stricken out) made the ground a paying proposition. He issued permits to pirates or moon-shiners for \$50 per year each. These pirates gave them the privileye when eaught tonging on the natural rocks. dirates gave them the privilexe when caught tonging on the natural rocks which adjoin, to swear they were working on the rented ground. Four years ago I was an eye witness to the capture of one of these pirates by Captain Hudgins, who fined him \$100. The criminal showed his permit and at trial swore he was working on ground, and, of cottres he was cleared. A few days later, it reply to a question asked by me, he said the permit cost him but \$50 artifications where \$500 every year; the only feature about the matter he did not like was that he had to swear to at the but that was better than paying \$100.

The oyster commissioners have re-cently built a warch house as poo-sible on account of the depth of water If the Mills lines is as Mr. Lawso-states, on the outside of the Baylo survey, Mr. Mills and his fleet woul be working south of the line running from the house to Point of Shoa light. But I am informed by good authority that Mr. Mills has been working north of this line, and Mr. Lawson has come to his rescue by

1 The Ways of Moles. /

Among common animass Lew have been less studied in their II by history than the mole. An English naturalist, Mr. Lionel E. Adams, says that under the "fortress" which the mole constructs above the surface of the ground will always be found to serious. ground will always be four 1 a series of tunnels, running out b meath the adjacent field. A curious feature almost invariably found is a perpendicularyrun penetrating about a foot below the bottom of the I est and then turning upward to meet another run. A mole is never found in his nest, although it may be yet, warm from his body when opened. Junied by smell and hearing a mole frequently locates the nest of a part fidge or pheasant above his run and, penetrating it from below, ears the egr >. The adult mole is practically blind; but there are embryonic indications that the power of Is practically blind; but there are embryone indication with the power of significant the race has deteriorated.
